Salsify Help Tips:

Here's a tip related to entering many SKUs (say 20) for the same group:

I'd recommend entering one SKU from the group then downloading ALL the attributes for the first SKU entered into excel. Use Excel to copy/paste to duplicate that row into the other 19 rows. Edit those columns that differ. Finally, import that spreadsheet which will map exactly to the Living Spaces attributes since you downloaded all the attributes.

You can down load from the ACTION menu while on the main product list page. I'd use filters to only show the collection you're working to load.
